

# Tiszta Viz Organic Skin Care & Spa

## Waxing Release Form

Name \_\_\_\_\_

I have read not to wax if I used certain medications and products that make the skin more sensitive such as Acutane, Retin A, Differin, Renova, blood thinners, high antibiotic use, retinol, and alpha-hydroxy products. Sensitivity is not limited to these products and I understand that it is my responsibility to bring up any questionable products that I may be using.

I also understand that dry skin or regular skin sensitivity may cause irritation or tearing of the skin during a waxing service.

Certain physical conditions such as diabetes, pregnancy and predisposition to cold sores may also cause heightened sensitivity of the skin. Medical procedures such as face-lifts, chemical peels and dermabrasion should be disclosed to the aesthetician. The treatments that I receive here are voluntary and I release Tiszta Viz Organic Skin Care & Spa or licensed professional from any liability and assume full responsibility thereof.
